Sow-Low

BATEMAN

RB 15

Sow-Low

The low ground pressure tyres and heavy duty eradicator tyres help prevent wheelings and cuts down on soil compaction.

Folding and unfolding of the drill is a simple process and is entirely hydraulically operated from within the cab.

The markers are of a robust construction and may be folded and unfolded independently whilst on the move.

The drill folds neatly and compactly away behind the RB 15 when in transport mode.

Simple and quick demounting of the drill is easily carried out by one person using the unit jacks supplied. Thus allowing the RB 15 a fast change over for other duties.

Standard Features

- Hopper capacity - 2.5 tonne
- Width in transit - 2.5 metres
- Controls - all mounted in cab
- Hydraulic depth control
- Tool bar width - 6 metres x 48 coulters
- Three eradicator tynes per wheel
- Tramline kit with four shut-off valves
- Low seed level hopper indicator switch
- 3 demounting jacks
- Hopper canopy
